Triumph 2

Tall Fescue Blend

Tall fescue's make early, fast growing lawns and can provide a beautiful lawn with low maintenance. This grass specie is used in erosion control areas; country meadows plantings with wild flowers, and pastures. Fescue can be used anywhere a cool season all around general-purpose grass is needed. Tall fescue is a coarser bladed, dense, clumping grass that grows well in shady areas and is often mixed with other grasses for just this quality. It was brought to the US in the early 1800's for pasturage purposes and now grows in about 4/5 of our country.

The fact that it stays green all year makes it more acceptable as a lawn grass. It has a dense root system and therefore a great tolerance to drought conditions. The older varieties are coarser textured and wear well. Fescue performs best in heavier soil with a lot of organic matter and grows in a large area of the USA.

Tall fescue is a grass that can endure heavy foot traffic and wear. Improved varieties have been developed for higher disease and insect resistance along with other desirable lawn and pasture traits. All of these selections are available for planting from seed. Lawns are normally over seeded every year for thicker sod formation and to repair thinning areas in your lawn. When properly managed tall fescue can provide a green lawn all year round.
